

Lite Run is a unique therapy device that uses spacesuit technology to help people regain their ability to stand and walk following an injury or disability.

The Lite Run Gait Trainer offers 5 distinct benefits over other gait training systems.

- 1) Patient Comfort** – patients are more comfortable, allowing earlier engagement and more therapy time
- 2) Safety** – fall-proof design and sit-to-stand benefit both patients and therapists
- 3) Patients Walk Farther** – In a clinical study, patients walked more than twice as far compared to harnesses
- 4) Easy Setup** – this device is so easy to use that patient set-up takes less than 5 minutes
- 5) New Patients** – can treat challenging patients unsuitable for harnesses and exoskeletons

The bottom line is Lite Run helps your patients reach their goals **FASTER**.
